🎓 Education

Norwegian University of Science and Technology (NTNU)

2020 – Present

Master's degree in Cybernetics and Robotics at the Norwegian University of Science and Technology

Trondheim

- Specialization: Autonomous Systems with a focus on statistics and estimation techniques. Notable courses:
 - TTK4190 - Guidance, Navigation and Control of Vehicles
 - TTK4250 - Sensor Fusion
- Master's thesis: Kalman Filtering of Non-Gaussian Disturbances in Glucose Measurements

University of Stuttgart

Mar. 2025 – Aug. 2025

Exchange semester at the University of Stuttgart focusing on machine learning and autonomous robotics

Stuttgart, Germany

University of Bergen (UiB)

2021 – 2022

Single year programme of pedagogy at the University of Bergen

Bergen

🔧 Experience

Arm Norway

Jun. 2024 – Aug. 2024

Summer intern

Trondheim

- Hardware Engineer on the GPU team
- Worked with designing energy saving solutions on a Register-transfer Level using SystemVerilog
- Gained hands-on experience working with comprehensive testing and verification pipelines

Nordic Semiconductor

Jun. 2023 – Dec. 2023

Summer intern & Part time employee

Trondheim

- Main focus on web development using the Django framework in python and deployment using Docker
- Implemented database using MySQL and authentication with LDAP
- Applied Git and Jira in collaborative environments

NTNU

Sep. 2022 – Jun. 2023

Senior Student Assistant the course TTK101 - Instrumentation and Measurements

Trondheim

- Organized and led the course laboratory sessions for 50+ participants, in which the students created a PID controller for a DC motor implemented using analog components on a breadboard
- Was responsible for managing the student assistant team, lab safety, and course evaluations
- Helped overhauling the course assignments as well as creating new tasks and exercises

🔧 Projects

Bass Pedal

Fully analog distortion pedal for bass guitar - More details

- Designed circuit with active and passive components based on frequency response analysis
- Created the Printed Circuit Board using Altium Designer and assembled by soldering through-hole components
- 3D printed outer casing from designs created using Fusion 360

Gravity simulator

Program for simulating n-body problems

- Dynamics calculated using Newton's law of universal gravitation and equations of motion
- Programmed using python

⚙️ Skills

Programming languages & frameworks Python, Matlab, ROS, C++, SystemVerilog, Django

Technical knowledge Linux, Git, Docker, Altium Designer, CAD software

Languages Native: Norwegian, Fluent: English, Intermediate: German (B1)
